

Nausea and vomiting in pregnancy

Getting early medical care

If HG patients are given early medical care, enough to manage their symptoms and minimize nutritional deficiencies, both mother and child will be healthier now and in the future.

Avoiding the long-term effects

The costs for HG treatment exceed \$3 billion for HG each year in the US, and many get inadequate care. The long-term effects of HG and its complications add many \$1000's in costs over time.

option care health®

Benefit of Option Care Women's Health Hyperemesis programs

- Nurses with 20+ years of OB nursing experience
- 24/7/365 telephonic support
- Subcutaneous infusion pump therapy for Ondansetron and Metoclopramide therapy with IV hydration
- Therapeutic medication levels without the peaks and troughs of oral medications
- Patient controlled hourly demand doses
- Titration of medication dosing for optimal patient results
- Reduce calls to providers office and decreased hospitalizations/ER visits

Reducing emergency outpatient visits

There are also over 375,000 outpatient visits to emergency rooms for treatment of HG at an estimated cost of \$2.5 billion.

Providing families with a better future

76.0% of families reported changes in their plans for future childbearing. – “The psychosocial burden of hyperemesis gravidarum.”

(2007) Journal of perinatology. B Poursharif, et. Al
